Copyright Notice

All Rights Reserved.

The information in this document is subject to change without prior notice in order to improve the reliability, design and function. It does not represent a commitment on the part of the manufacturer.

Under no circumstances will the manufacturer be liable for any direct, indirect, special, incidental, or consequential damages arising from the use or inability to use the product or documentation, even if advised of the possibility of such damages.

This document contains proprietary information protected by copyright. All rights are reserved. No part of this manual may be reproduced by any mechanical, electronic, or other means in any form without prior written permission of the manufacturer.

Declaration of Conformity

CE

The CE symbol on your product indicates that it is in compliance with the directives of the Union European (EU). A Certificate of Compliance is available by contacting Technical Support.

This product has passed the CE test for environmental specifications when shielded cables are used for external wiring. We recommend the use of shielded cables. This kind of cable is available from ARBOR. Please contact your local supplier for ordering information.

This product has passed the CE test for environmental specifications. Test conditions for passing included the equipment being operated within an industrial enclosure. In order to protect the product from being damaged by ESD (Electrostatic Discharge) and EMI leakage, we strongly recommend the use of CE-compliant industrial enclosure products.

Warning

This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

FCC Class A

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1)This device may not cause harmful interference, and
- (2)This device must accept any interference received, including interference that may cause undesired operation.

NOTE:

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

RoHS

ARBOR Technology Corp. certifies that all components in its products are in compliance and conform to the European Union's Restriction of Use of Hazardous Substances in Electrical and Electronic Equipment (RoHS) Directive 2002/95/EC.

The above mentioned directive was published on 2/13/2003. The main purpose of the directive is to prohibit the use of lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB), and polybrominated diphenyl ethers (PBDE) in electrical and electronic products. Member states of the EU are to enforce by 7/1/2006.

ARBOR Technology Corp. hereby states that the listed products do not contain unintentional additions of lead, mercury, hex chrome, PBB or PBDB that exceed a maximum concentration value of 0.1% by weight or for cadmium exceed 0.01% by weight, per homogenous material. Homogenous material is defined as a substance or mixture of substances with uniform composition (such as solders, resins, plating, etc.). Lead-free solder is used for all terminations (Sn(96-96.5%), Ag(3.0-3.5%) and Cu(0.5%)).

SVHC / REACH

To minimize the environmental impact and take more responsibility to the earth we live, Arbor hereby confirms all products comply with the restriction of SVHC (Substances of Very High Concern) in (EC) 1907/2006 (REACH --Registration, Evaluation, Authorization, and Restriction of Chemicals) regulated by the European Union.

All substances listed in SVHC < 0.1 % by weight (1000 ppm)

Warning

Single Board Computers and their components contain very delicate Integrated Circuits (IC). To protect the Single Board Computer and its components against damage from static electricity, you should always follow the following precautions when handling it :

1. Disconnect your Single Board Computer from the power source when you want to work on the inside.
2. Hold the board by the edges and try not to touch the IC chips, leads or circuitry.
3. Use a grounded wrist strap when handling computer components.
4. Place components on a grounded antistatic pad or on the bag that comes with the Single Board Computer, whenever components are separated from the system.

Replacing the Lithium Battery

Incorrect replacement of the lithium battery may lead to a risk of explosion.

The lithium battery must be replaced with an identical battery or a battery type recommended by the manufacturer.

Do not throw lithium batteries into the trash-can. It must be disposed of in accordance with local regulations concerning special waste.

Technical Support

If you have any technical difficulties, please consult the user's manual first at: <http://arbor-technology.com/>

Please do not hesitate to call or e-mail our customer service when you still cannot find out the answer.

Warranty

This product is warranted to be in good working order for a period of two years from the date of purchase. Should this product fail to be in good working order at any time during this period, we will, at our option, replace or repair it at no additional charge except as set forth in the following terms. This warranty does not apply to products damaged by misuse, modifications, accident or disaster.

Vendor assumes no liability for any damages, lost profits, lost savings or any other incidental or consequential damage resulting from the use, misuse of, or inability to use this product. Vendor will not be liable for any claim made by any other related party.

Vendors disclaim all other warranties, either expressed or implied, including but not limited to implied warranties of merchantability and fitness for a particular purpose, with respect to the hardware, the accompanying product's manual(s) and written materials, and any accompanying hardware. This limited warranty gives you specific legal rights.

Return authorization must be obtained from the vendor before returned merchandise will be accepted. Authorization can be obtained by calling or faxing the vendor and requesting a Return Merchandise Authorization (RMA) number. Returned goods should always be accompanied by a clear problem description.

Chapter 1

Introduction

1.1 The Product

The EmETXe-i87M2 Series is a space-conscious CPU board of 125 mm x 95 mm to take up only small footprint in your system. By the architecture of Type 6, the board has two high-performance connectors to promise stable data passing rate. The soldered onboard Intel® 5th Generation Core™ processor, along with integrated Intel® HD Graphics Gen 7.5 graphics chipset, bring Analog RGB, LVDS and DDI solution for most CRT monitors or LCD video panels.

For system configuration, the board is supported by AMI UEFI BIOS. EmETXe-i87M2 Series is an ideal choice for some demanding industrial control and data communications by its significant processing performance, low power consumption and these features:

- Soldered onboard 5th Generation Intel® Core™ Processor
- Integrated Gigabit Ethernet
- Dual channels 24-bit LVDS, Analog RGB, and 3 x DDI ports
- Supports 3 independent displays
- ECC Memory supported
- Extended Operating Temp.: -40 ~ 85°C

1.2 About This Manual

This user's manual provides general information and installation instructions about the product. This user's manual is intended for experienced users and integrators with hardware knowledge of personal computers. If you are not sure about any description in this booklet. Please consult your vendor before further handling.

1.3 Specifications

System	
CPU	Soldered onboard 5 th Generation Intel® Core™ i7-5700EQ 2.6GHz (Base) /3.4GHz (Turbo)
Memory	2 x DDR3L ECC SO-DIMM sockets, supporting 1600MHz up to 16GB SDRAM
Chipset	Intel® PCH QM87
BIOS	AMI® UEFI BIOS
Watchdog Timer	1~255 levels reset
I/O	
USB Port	12 x USB ports: - 8 x USB 2.0 ports - 4 x USB 3.0 ports
Storage	4 x Serial ATA ports: - 2 ports with 600MB/s HDD transfer rate - 2 ports with 300MB/s HDD transfer rate SATA RAID 0, 1, 5, 10 supported
Expansion Bus	1 x PCIe x16 Gen3 lanes 7 x PCIe x1 Gen2 lanes
Ethernet Chipset	1 x Intel® i218LM GbE PHY
Audio	HD Audio link
Display	
Graphics Chipset	Integrated Intel® HD Gen 7.5
Graphics Interface	Analog RGB supports up to 1920x1200@60Hz LCD: Dual Channels 24-bit LVDS up to 1920 x 1200 @60Hz (OEM request) 3 x DDI ports
Mechanical & Environmental	
Power Requirement	+12V, 5VSB
Power Consumption	1.13A@12V, 0.31A@5V, 0.36A@3.3V with i7-5700EQ (Typical)
Operating Temp.	-40 ~ 85°C (-40 ~ 185°F)
Operating Humidity	0% ~ 95% @ 60°C (non-condensing)
Dimension (L x W)	125 x 95 mm (4.9" x 3.7")

1.4 Inside the Package

Before you begin installing your single board, please make sure that the following materials have been shipped:

1 x EmETXe-i87M2 COM Express CPU Module

1 x Driver CD

1 x Quick Installation Guide

If any of the above items is damaged or missing, contact your vendor immediately.

1.5 Ordering Information

EmETXe-i87M2-5700EQ	5 th Generation Intel® Core i7-5700EQ 2.6GHz (Base) /3.4GHz (Turbo)/QM87 WT COM Express® CPU module
---------------------	---

1.5.1 Optional Accessories

HS-87M2-C2	Cooler 125x95x40mm
PBE-1702	COM Express® Type 6 evaluation carrier board (ATX form factor)
CBK-04-1702-00	Cable Kit 1 x SATA cable 2 x COM-port cables 1 x USB cable

1.6 The Installation Paths of CD Driver

The CPU module supports Windows 7 and 8.1 Find the necessary drivers on the CD that comes with your purchase. For different OS, the driver installation may vary slightly, but generally they are similar. Find the drivers on CD by the following paths:

Windows 7

Chapter 2

Board Overview

2.1 What Is “COM Express®”?

With more and more demands on small and embedded industrial boards, a multi-functional COM (Computer-on-Module) surfaces as a great solution.

COM Express® supports seven pin-out types applying to Basic and Extended form factors:

Module Type 1 and 10 support single connector with two rows (220 pins).

Module Type 2, 3, 4, 5 and 6 support two connectors with four rows (440 pins). EmETXe-i87M2 Series is a Type-6 module.

Difference between Standard Type 6 and EmETXe-i87M2 Series is listed as below:

Module Type	Standard Type 6	EmETXe-i87M2 Series
Connectors	2	2
Connector Rows	A, B, C, D	A, B, C, D
PCIe Lanes (Max)	24	23
LAN (Max)	1	1
Serial Ports (Max)	2	0
Digital Display I/F (Max)	3	3
USB 3.0 Ports (Max)	4	4

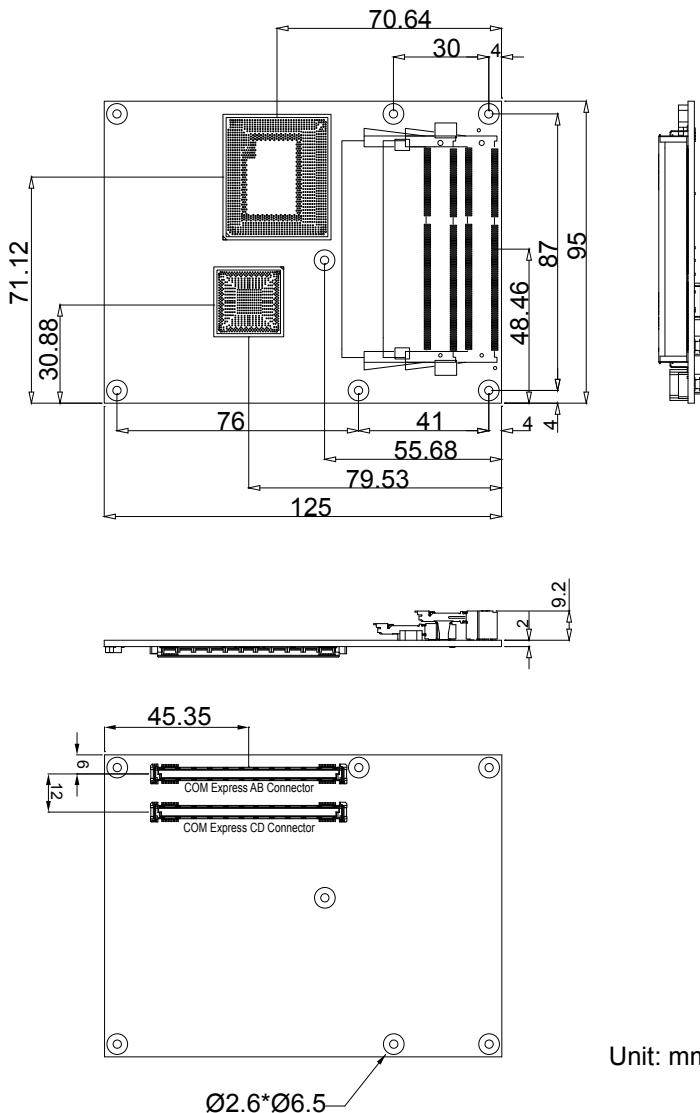

Row AB provides pins for PCI Express, SATA, LVDS, LCD channel, LPC bus, system and power management, VGA, LAN, and power and ground interfaces.

Row CD provides SDVO and legacy PCI and IDE signals next to additional PCI Express, LAN and power and ground signals. The COM are targeted at following applications:

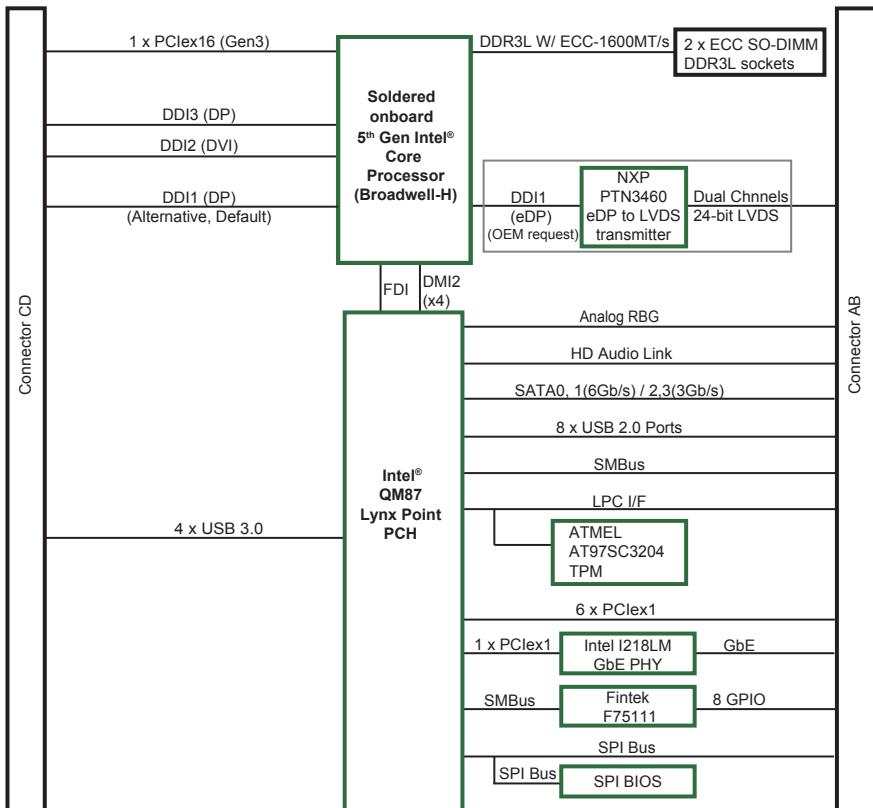

- Retail & Advertising
- Medical
- Test & Measurement
- Gaming & Entertainment
- Industrial & Automation
- Military & Government
- Security

2.2 Board Dimensions

The following illustration shows the dimension of EmETXe-i87M2 Series, with the measurements in width, depth, and height called out.

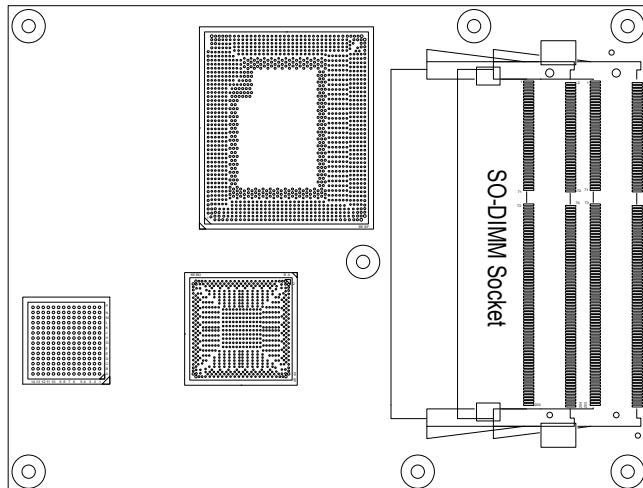

2.3 Block Diagram

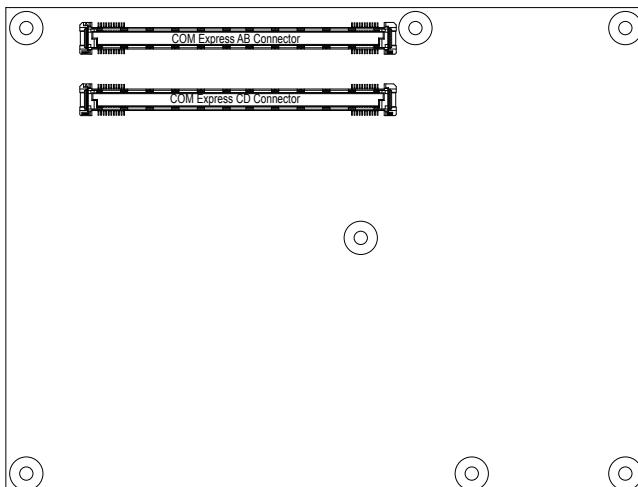

2.4 Connector Pin Definition

Being a most commonly-used Type 6, the EmETXe-i87M2 Series features two board-to-board connectors on bottom side.

Chapter 3

Installation & Maintenance

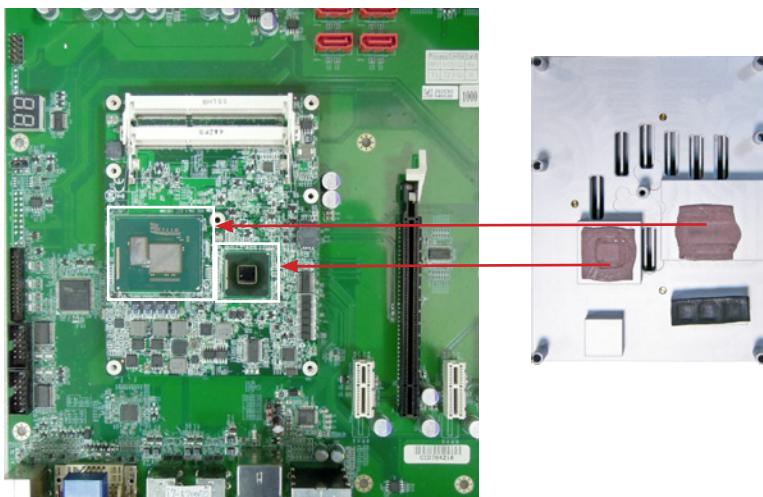

3.1 Installing the CPU Module on Carrier Board

1. Find the COM Express connectors on carrier board PBE-1702, which is available in Section [1.5.1 Optional Accessories on page 5](#).
2. Embed EmETXe-i87M2 Series into PBE-1702 via COM Express connectors as below; that is, COM Express AB to AB and CD to CD.

3.2 Installing the Heatsink

1. Locate EmETXe-i87M2 Series mounted on PBE-1702.
2. Prepare the heatspread included in optional accessories. (See Section [1.5.1 Optional Accessories on page 5](#)) Put heatspread on the CPU module and lock it. Make sure thermal grease in contact with CPU and chipset on CPU module. Plug power cable into appropriate connector if there is a fan.

This page is intentionally left blank.

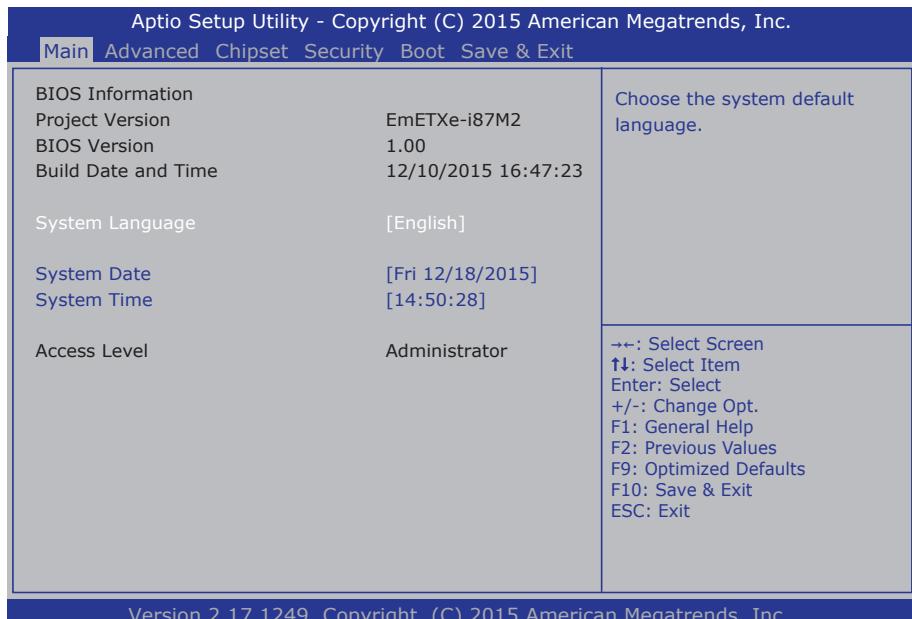

Chapter 4

BIOS

4.1 Main

The BIOS provides a Setup utility program for specifying the system configurations and settings. The BIOS RAM of the system stores the Setup utility and configurations. When you turn on the computer, the BIOS is immediately activated. To enter the BIOS SETUP UTILITY, press “**Delete**” once the power is turned on. When the computer is shut down, the battery on the motherboard supplies the power for BIOS RAM.

The **Main Setup** screen lists the following information:

Setting	Description
System Language	Choose the system default language.
System Date	Set the system date. Use Tab to switch between Data elements. Note that the 'Day' automatically changes when you set the date. <ul style="list-style-type: none"> ▶ The date format is: <ul style="list-style-type: none"> Day: Sun to Sat Month: 1 to 12 Date: 1 to 31 Year: 1998 to 2099

System Time	Set the system time. Use Tab to switch between Time elements. ► The time format is: Hour: 00 to 23 Minute: 00 to 59 Second: 00 to 59
-------------	--

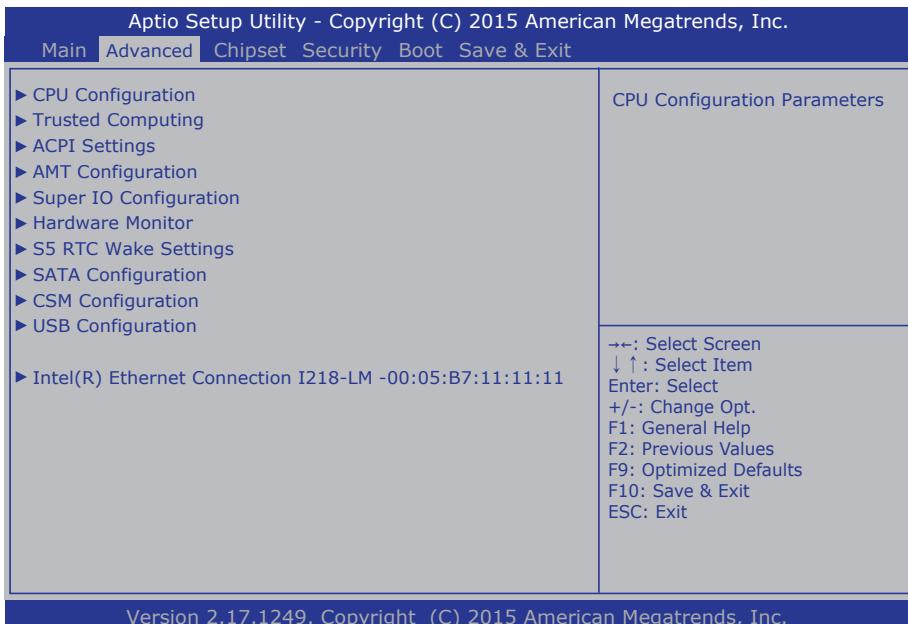

Key Commands

BIOS Setup Utility is mainly a key-based navigation interface. Please refer to the following key command instructions for navigation process.

Keystroke	Function
◀ ▶	Move to highlight a particular configuration screen from the top menu bar / Move to highlight items on the screen
▼ ▲	Move to highlight previous/next item
Enter	Select and access a setup item/field
Esc	On the Main Menu – Quit the setup and not save changes into CMOS (a message screen will display and ask you to select “OK” or “Cancel” for exiting and discarding changes. Use “←” and “→” to select and press “Enter” to confirm) On the Sub Menu – Exit current page and return to main menu
Page Up / +	Increase the numeric value on a selected setup item / make change
Page Down -	Decrease the numeric value on a selected setup item / make change
F1	Activate “General Help” screen
F10	Save the changes that have been made in the setup and exit. (a message screen will display and ask you to select “OK” or “Cancel” for exiting and saving changes. Use “←” and “→” to select and press “Enter” to confirm)

4.2 Advanced

The “Advanced” setting page provides you the options to configure the details of your hardware, such as ACPI, CPU, SATA, AMT, USB and Super IO.

Setting	Description
CPU Configuration	See Section 4.2.1 CPU Configuration on page 24
Trusted Computing	See Section 4.2.2 Trusted Computing on page 25
ACPI Settings	See Section 4.2.3 ACPI Settings on page 25
AMT Configuration	See Section 4.2.4 AMT Configuration on page 25
Super IO Configuration	See Section 4.2.5 Super IO Configuration on page 26
H/W Monitor	See Section 4.2.6 Hardware Monitor on page 27
S5 RTC Wake Settings	See Section 4.2.7 S5 RTC Wake Settings on page 28
SATA Configuration	See Section 4.2.8 SATA Configuration on page 29
CSM Configuration	See Section 4.2.9 CSM Configuration on page 30

USB Configuration	See Section 4.2.10 USB Configuration on page 31
Intel(R) Ethernet Connection I218-LM	See Section 4.2.11 Intel(R) Ethernet Connection I218-LM on page 33

4.2.1 CPU Configuration

Setting	Description
Hyper-threading	Enabled (default) for Windows XP and Linux (OS optimized for Hyper-Threading Technology) and Disabled for other OS (OS not optimized or Hyper-Threading Technology). When Disabled only one thread per enabled core is enabled.
Active Processor Cores	Number of cores to enable in each processor package. ▶ Options: All (default) and 1
Limit CPUID Maximum	Disabled for Windows XP ▶ Options: Enabled or Disabled (default)
Execute Disable Bit	XD can prevent certain classes of malicious buffer overflow attacks when combined with a supporting OS (Windows Server 2003 SP1, Windows XP SP2, SuSE Linux 9.2, RedHat Enterprise 3 Update 3.) ▶ Options: Enabled (default) or Disabled
Intel Virtualization Technology	When enabled, a VMM can utilize the additional hardware capabilities provided by Vanderpool Technology ▶ Options: Enabled (default) or Disabled
EIST	Enable (default)/ Disable Intel SpeedStep
Turbo Mode	Enable (default)/ Disable the Turbo Mode
Performance/Watt	Set the mode of Performance/Watt ▶ Options: Performance (default), Balanced Performance , Balanced Energy or Energy Efficient .

4.2.2 Trusted Computing

Access this submenu to enable/disable the Trusted Computing function.

Setting	Description
Security Device Support	Enable/Disable (default) the TPM Support
TPM State	Enable (default) /disable Security Device
Device Select	Set the supported device ► Options: Auto (default), TPM1.2 or TPM 2.0 .

4.2.3 ACPI Settings

Setting	Description
ACPI Sleep State	Select ACPI sleep state the system will enter when the SUSPEND button is pressed. ► Options: Suspend Disabled , S1 only(CPU Stop Clock) , S3 only(Suspend to RAM) (default), Both S1 and S3 available for OS to choose from
Enable Hibernation	Enable (default)/ Disable System ability to Hibernate (OS/S4 Sleep State). This option may be not effective with some OS.

4.2.4 AMT Configuration

Setting	Description
Intel AMT	Enable (default)/ Disable Intel(R) Active Management Technology BIOS Extension. Note : iAMT H/W is always enabled. This option just controls the BIOS extension execution. If enabled, this requires additional firmware in the SPI device.

4.2.5 Super IO Configuration

Setting	Description
Serial Port 1 Configuration	
Serial Port 2 Configuration	See below
Parallel Port Configuration	
Restore AC Power loss	<p>Sets whether the system should power on or power off when the power resumes after accidental power loss.</p> <ul style="list-style-type: none"> ▶ Options: Last State, Power On (default), and Power Off.

Serial Port 1~2 Port Configuration

Setting	Description
Serial Port	Enable (default)/ Disable Serial Port (COM). Select an optimal setting for Super IO device. <ul style="list-style-type: none"> ▶ Options:
Change Settings	<ul style="list-style-type: none"> IO=3F8h; IRQ=4 (default for Serial Port 1); IO=2F8h; IRQ=3 (default for Serial Port 2);
Device Mode	Select the Serial Port mode for Port 2 <ul style="list-style-type: none"> ▶ Options:

Parallel Port Configuration

Setting	Description
Parallel Port	Enable (default)/Disable Parallel Port (LPT/LPTE).
Change Settings	Select an optimal setting for Super IO device. ▶ Options: Auto(default); -- IO=378h; IRQ5 -- IO=378h; IRQ3, 4, 5, 6, 7, 10, 11, 12 -- IO=3BCh; IRQ3, 4, 5, 6, 7, 10, 11, 12 -- IO=378h -- IO=278h -- IO=3BCh.
Device Mode	Select the Serial Port mode for Port 2 ▶ Options: STD Printer Mode(default), SPP Mode, EPP-1.9 and SPP Mode, EPP-1.7 and SPP Mode, ECP Mode, ECP Mode and EPP 1.9 Mode, ECP and EPP 1.7 Mode.

4.2.6 Hardware Monitor

Aptio Setup Utility - Copyright (C) 2015 American Megatrends, Inc.

4.2.7 S5 RTC Wake Settings

Access this submenu to enable/disable the system to wake up on a specified time.

The featured setting is:

Setting	Description								
Wake System with Fixed Time	<p>Sets if to awake the system at a defined moment.</p> <ul style="list-style-type: none"> ▶ Options available are Enabled and Disabled (default). ▶ Enable this feature to awake the system at a defined moment in time. When enabled, the following settings become available: <table border="1" data-bbox="367 509 1009 832"> <thead> <tr> <th data-bbox="367 509 594 549">Setting</th><th data-bbox="594 509 1009 549">Description</th></tr> </thead> <tbody> <tr> <td data-bbox="367 549 594 644">Wake up hour</td><td data-bbox="594 549 1009 644">Defines the (hour) time to awake the system. ▶ 0 to 23 configurable.</td></tr> <tr> <td data-bbox="367 644 594 740">Wake up minute</td><td data-bbox="594 644 1009 740">Defines the (minute) time to awake the system. ▶ 0 to 59 configurable.</td></tr> <tr> <td data-bbox="367 740 594 832">Wake up second</td><td data-bbox="594 740 1009 832">Defines the (second) time to awake the system. ▶ 0 to 59 configurable.</td></tr> </tbody> </table>	Setting	Description	Wake up hour	Defines the (hour) time to awake the system. ▶ 0 to 23 configurable.	Wake up minute	Defines the (minute) time to awake the system. ▶ 0 to 59 configurable.	Wake up second	Defines the (second) time to awake the system. ▶ 0 to 59 configurable.
Setting	Description								
Wake up hour	Defines the (hour) time to awake the system. ▶ 0 to 23 configurable.								
Wake up minute	Defines the (minute) time to awake the system. ▶ 0 to 59 configurable.								
Wake up second	Defines the (second) time to awake the system. ▶ 0 to 59 configurable.								
Wake System with Dynamic Time	<p>Sets if to awake the system some time in the future.</p> <ul style="list-style-type: none"> ▶ Options available are Enabled and Disabled (default). ▶ Enable this feature to awake the system some time from now. When enabled, the following setting becomes available: <table border="1" data-bbox="367 990 1009 1133"> <thead> <tr> <th data-bbox="367 990 594 1030">Setting</th><th data-bbox="594 990 1009 1030">Description</th></tr> </thead> <tbody> <tr> <td data-bbox="367 1030 594 1133">Wake up minute increase</td><td data-bbox="594 1030 1009 1133">Defines how long from now to awake the system. ▶ 1 to 5 minutes configurable.</td></tr> </tbody> </table>	Setting	Description	Wake up minute increase	Defines how long from now to awake the system. ▶ 1 to 5 minutes configurable.				
Setting	Description								
Wake up minute increase	Defines how long from now to awake the system. ▶ 1 to 5 minutes configurable.								

4.2.8 SATA Configuration

Aptio Setup Utility - Copyright (C) 2015 American Megatrends, Inc.		
Advanced		
SATA Controller(s)	[Enabled]	Console Redirection Enable or Disable.
SATA Mode Selection	[AHCI]	
SATA Controller Speed	[Default]	
Serial ATA Port 0	Empty	
Software Preserve	Unknown	
Port 0	[Enabled]	
Hot Plug	[Disabled]	
SATA Device Type	[Hard Disk Drive]	
Serial ATA Port 1	Empty	
Software Preserve	Unknown	
Port 1	[Enabled]	
Hot Plug	[Disabled]	
SATA Device Type	[Hard Disk Drive]	
Serial ATA Port 2	Empty	
Software Preserve	Unknown	
Port 2	[Enabled]	
Hot Plug	[Disabled]	
SATA Device Type	[Hard Disk Drive]	

Version 2.17.1249. Copyright (C) 2012 American Megatrends, Inc.

Setting	Description
SATA Controller(s)	Enable (default)/ disable SATA Device.
SATA Mode Selection	Determines how SATA controller(s) operate. ► Options: IDE , AHCI (default) or RAID
SATA Controller Speed	Indicates the maximum speed the SATA controller can support. ► Options: Default (default), Gen1 , Gen2 , Gen3
Port 0/1/2/3/4/5	Enable (default)/ disable SATA Port.
Hot plug	Enable / disable (default) the SATA port Hot plug.
External SATA	Enable (default)/ disable External SATA support.
SATA Device Type	Identify the SATA port is connected to Solid State Drive or Hard Disk Drive (default).

Spin Up Device	On an edge detect from 0 to 1, the PCH starts a COM-RESET initialization sequence to the device. ▶ Options: Enabled or Disabled (default)
----------------	--

4.2.9 CSM Configuration

Setting	Description
GateA20 Active	Select setting for GateA20. ▶ Options: UPON REQUEST - GA20 can be disabled using services or ALWAYS -do not allow disabling GA20
Option ROM Messages	Set display mode for Option ROM. ▶ Options: Force BIOS (default) and Keep Current
Boot option filter	This option controls Legacy/UEFI ROMs priority. ▶ Options: [UEFI and Legacy] (default); [Legacy only] ; and [UEFI only] .
Network	Control the execution of UEFI and Legacy PXE OpROM ▶ Options: Do not launch (default) and Legacy
Storage	Control the execution of UEFI and Legacy Storage OpROM ▶ Options: Do not launch (default) and Legacy
Other PCI devices	Control the OpROM execution policy for device other than Network, Storage or Video ▶ Options: Do not launch (default), UEFI and Legacy

4.2.10 USB Configuration

Setting	Description
Legacy USB Support	Enables (default) Legacy USB support. AUTO option disables legacy support if no USB devices are connected. DISABLE option will keep USB devices available only for EFI applications.
USB3.0 Support	Enable (default)/ Disable USB3.0 (XHCI) Controller support.
XHCI Hand-off	This is a workaround for OSes without XHCI hand-off support. The XHCI ownership change should be claimed by XHCI driver. The optional settings are: Enabled / Disabled .
EHCI Hand-off	This is a workaround for OSes without EHCI hand-off support. The EHCI ownership change should be claimed by EHCI driver. The optional settings are: Disabled / Enabled .
USB Mass Storage Driver Support	Enable (default)/ disable USB Mass Storage Driver Support.

USB hardware delay and time-out	<p>This is a submenu to configure the features of USB hardware delay and time-out. The featured settings are:</p> <table border="1"><thead><tr><th>Setting</th><th>Description</th></tr></thead><tbody><tr><td>USB Transfer time-out</td><td><p>Use this item to set the time-out value for control, bulk, and interrupt transfers.</p><ul style="list-style-type: none">▶ Options available are: 1 sec, 5 sec, 10 sec, 20 sec</td></tr><tr><td>Device reset time-out</td><td><p>Use this item to set USB mass storage device start unit command time-out.</p><ul style="list-style-type: none">▶ Options available are: 10 sec, 20 sec, 30 sec, 40 sec</td></tr><tr><td>Device power-up delay</td><td><p>Use this item to set maximum time the device will take before it properly reports itself to the host controller. Save Changes and Reset	Reset the system after saving the changes.
Discard Changes and Reset	Reset the system after saving the changes.
Restore Defaults	Restore/Load Default values for all the setup options. ▶ Enter the item and then a dialog box pops up: Load Optimized Defaults? (Yes/ No)
Launch EFI Shell from filesystem device	Attempt to launch EFI Shell application (Shellx64.efi) from one of the available filesystem devices. Press “Enter” to proceed.

This page is intentionally left blank.

Appendix

Appendix A: I/O Port Address Map

Each peripheral device in the system is assigned a set of I/O port addresses which also becomes the identity of the device. The following table lists the I/O port addresses used.

Address	Device Description
0x0000003F8-0x000003FF	Communications Port (COM1)
0x0000002F8-0x000002FF	Communications Port (COM2)
0x00000000-0x0000001F	Direct memory access controller
0x00000081-0x00000091	Direct memory access controller
0x00000093-0x0000009F	Direct memory access controller
0x000000C0-0x000000DF	Direct memory access controller
0x00003080-0x0000309F	Ethernet Controller
0x00000070-0x00000077	Motherboard resources
0x00000A00-0x00000A1F	Motherboard resources
0x00000A20-0x00000A2F	Motherboard resources
0x00000A30-0x00000A3F	Motherboard resources
0x0000002E-0x0000002F	Motherboard resources
0x0000004E-0x0000004F	Motherboard resources
0x00000061-0x00000061	Motherboard resources
0x00000063-0x00000063	Motherboard resources
0x00000065-0x00000065	Motherboard resources
0x00000067-0x00000067	Motherboard resources
0x00000080-0x00000080	Motherboard resources
0x00000092-0x00000092	Motherboard resources
0x000000B2-0x000000B3	Motherboard resources
0x00000680-0x0000069F	Motherboard resources
0x0000FFFF-0x0000FFFF	Motherboard resources
0x0000FFFF-0x0000FFFF	Motherboard resources
0x0000FFFF-0x0000FFFF	Motherboard resources
0x00001800-0x000018FE	Motherboard resources
0x0000164E-0x0000164F	Motherboard resources
0x00000800-0x0000087F	Motherboard resources
0x00001854-0x00001857	Motherboard resources
0x000000F0-0x000000F0	Numeric data processor
0x00000000-0x0000001F	PCI bus
0x00000D00-0x0000FFFF	PCI bus
0x000030E0-0x000030E7	PCI Serial Port
0x00000378-0x0000037F	Printer Port (LPT1)
0x00000020-0x00000021	Programmable interrupt controller
0x00000024-0x00000025	Programmable interrupt controller
0x00000028-0x00000029	Programmable interrupt controller

0x00000002C-0x00000002D	Programmable interrupt controller
0x00000030-0x00000031	Programmable interrupt controller
0x00000034-0x00000035	Programmable interrupt controller
0x00000038-0x00000039	Programmable interrupt controller
0x0000003C-0x0000003D	Programmable interrupt controller
0x000000A0-0x000000A1	Programmable interrupt controller
0x000000A4-0x000000A5	Programmable interrupt controller
0x000000A8-0x000000A9	Programmable interrupt controller
0x000000AC-0x000000AD	Programmable interrupt controller
0x000000B0-0x000000B1	Programmable interrupt controller
0x000000B4-0x000000B5	Programmable interrupt controller
0x000000B8-0x000000B9	Programmable interrupt controller
0x000000BC-0x000000BD	Programmable interrupt controller
0x000004D0-0x000004D1	Programmable interrupt controller
0x00003040-0x0000305F	SM Bus Controller
0x000030D0-0x000030D7	Standard AHCI 1.0 Serial ATA Controller
0x000030C0-0x000030C3	Standard AHCI 1.0 Serial ATA Controller
0x000030B0-0x000030B7	Standard AHCI 1.0 Serial ATA Controller
0x000030A0-0x000030A3	Standard AHCI 1.0 Serial ATA Controller
0x00003060-0x0000307F	Standard AHCI 1.0 Serial ATA Controller
0x00003000-0x0000303F	Standard VGA Graphics Adapter
0x000003B0-0x000003BB	Standard VGA Graphics Adapter
0x000003C0-0x000003DF	Standard VGA Graphics Adapter
0x00000070-0x00000077	System CMOS/real time clock
0x00000040-0x00000043	System timer
0x00000050-0x00000053	System timer

Appendix B: BIOS Memory Mapping

Address	Device Description
0xB2000000-0xB201FFFF	Ethernet Controller
0xB203C000-0xB203CFFF	Ethernet Controller
0xB2034000-0xB2037FFF	High Definition Audio Controller
0xB2030000-0xB2033FFF	High Definition Audio Controller
0xFED00000-0xFED003FF	High precision event timer
0xFF000000-0xFFFFFFFF	Intel(R) 82802 Firmware Hub Device
0xB0000000-0xFEFFFFFF	Motherboard resources
0xFED1C000-0xFED1FFFF	Motherboard resources
0xFED10000-0xFED17FFF	Motherboard resources
0xFED18000-0xFED18FFF	Motherboard resources
0xFED19000-0xFED19FFF	Motherboard resources
0xF8000000-0xFBFFFFFF	Motherboard resources
0xFED20000-0xFED3FFFF	Motherboard resources
0xFED90000-0xFED93FFF	Motherboard resources
0xFED45000-0xFED8FFFF	Motherboard resources
0xFF000000-0xFFFFFFFF	Motherboard resources
0xFEE00000-0xFEEFFFFFF	Motherboard resources
0xB0010000-0xB001FFFF	Motherboard resources
0xA0000-0xBFFFF	PCI bus
0xB0000000-0xFEFFFFFF	PCI bus
0xB203D000-0xB203DFFF	PCI Serial Port
0xB203F000-0xB203F00F	PCI Simple Communications Controller
0xB2038000-0xB20380FF	SM Bus Controller
0xB2039000-0xB20397FF	Standard AHCI 1.0 Serial ATA Controller
0xB203B000-0xB203B3FF	Standard Enhanced PCI to USB Host Controller
0xB203A000-0xB203A3FF	Standard Enhanced PCI to USB Host Controller
0xA0000-0xBFFFF	Standard VGA Graphics Adapter
0xB1000000-0xB1FFFFFF	Standard VGA Graphics Adapter
0xC0000000-0xCFFFFFFF	Standard VGA Graphics Adapter

0xFED40000-0xFED44FFF	Trusted Platform Module 1.2
0xB2020000-0xB202FFFF	Universal Serial Bus (USB) Controller

Appendix C: Interrupt Request Lines (IRQ)

Peripheral devices use interrupt request lines to notify CPU for the service required. The following table shows the IRQ used by the devices on board.

Level	Function
IRQ0	System timer
IRQ3	Communications Port (COM2)
IRQ4	Communications Port (COM1)
IRQ8	System CMOS/real time clock
IRQ10	Ethernet Controller
IRQ11	Universal Serial Bus (USB) Controller
IRQ11	PCI Simple Communications Controller
IRQ11	PCI Serial Port
IRQ11	SM Bus Controller
IRQ13	Numeric data processor
IRQ16	Standard Enhanced PCI to USB Host Controller
IRQ16	High Definition Audio Controller
IRQ19	Standard AHCI 1.0 Serial ATA Controller
IRQ22	High Definition Audio Controller
IRQ23	Standard Enhanced PCI to USB Host Controller
IRQ81~190	Microsoft ACPI-Compliant System

Appendix D: Watchdog Timer (WDT) Setting

WDT is widely used for industry application to monitor the activity of CPU. Application software depends on its requirement to trigger WDT with adequate timer setting. Before WDT time out, the functional normal system will reload the WDT. The WDT never time out for a normal system. The WDT will not be reloaded by an abnormal system, then WDT will time out and reset the system automatically to avoid abnormal operation.

This board supports 255 levels watchdog timer by software programming I/O ports. Below are the source codes written in C, please take them as WDT application example.

```
#include "math.h"
#include "stdio.h"
#include "dos.h"

#define DELAY_TIME 10

#define _SMBBA 0xF040 /* SMBus Base Address */
#define _SMSA 0x6E /* SMBus Slave Address , 75111R's Add = 6Eh or 9Ch */

unsigned char DIO_Set(unsigned char oMode, unsigned char oData);
unsigned char SMB_Byte_READ(int SMPORT, int DeviceID, int iREG_INDEX);
void SMB_Byte_WRITE(int SMPORT, int DeviceID, int oREG_INDEX, int oREG_DATA);

void main()
{
    WDT_Start(10);

    while(1)
    {
        iCount = WDT_Count();
        printf("\r Counts : %d ",iCount);

        delay(1000);
    }
}

void WDT_Start(int iCount)
{
    int iData;

    /* Configuration and function select Register - Enable WDTOUT2# output */
    iData = SMB_Byte_READ(SMB_PORT_AD, SMB_DEVICE_ADD, 0x03);
    iData = iData | 0x03;
    SMB_Byte_WRITE(SMB_PORT_AD, SMB_DEVICE_ADD, 0x03, iData);
    delay(DELAY_TIME);

    /* Watchdog Timer Range Register */
    SMB_Byte_WRITE(SMB_PORT_AD, SMB_DEVICE_ADD, 0x37, iCount);
```

```
delay(DELAY_TIME);

/* Watchdog Timer Control Register */
SMB_Byte_WRITE(SMB_PORT_AD, SMB_DEVICE_ADD, 0x36, 0x72);
}

int WDT_Count(void)
{
    int iData;

    /* Watchdog Timer Range Register */
    iData = SMB_BYTE_READ(SMB_PORT_AD, SMB_DEVICE_ADD, 0x37);

    return iData;
}

void WDT_Clear(int iCount)
{
    /* Watchdog Timer Range Register */
    SMB_BYTE_WRITE(SMB_PORT_AD, SMB_DEVICE_ADD, 0x37, iCount);
}

void WDT_Stop(void)
{
    /* Watchdog Timer Control Register */
    SMB_BYTE_WRITE(SMB_PORT_AD, SMB_DEVICE_ADD, 0x36, 0x52);
}
```
